Overview

The evaluation for San Diego County’s Juvenile Justice Crime Prevention Act (JJCPA) program is conducted by the SANDAG Criminal Justice Clearinghouse, as part of the cross-site evaluation for all JJCPA programs across California. The following six programs in San Diego County received JJCPA funds in FY 2024-25 and are presented in this report (Table 1):

- 1. Achievement Centers (AC)
- 2. Alternatives to Detention (ATD)
- 3. Community Assessment Team (CAT)/Juvenile Diversion
- 4. CHOICE
- 5. Behavioral Health Court (BHC)
- 6. Substance Use Disorder Services (SUDS)

Table 1: FY 2024-25 JJCPA Program Completion Successful Numbers and Desistance from Justice System Contact up to 12 months after Program Intake¹

Program	Successfully Exited	Percentage with No Justice Contact
AC	69 (49%)	84% no probation referral 93% no sustained petition
ATD	543 (96%)	92% no probation referral 98% did not have a sustained petition
CAT/Juvenile Diversion	2,100 (92%)	97% no probation referral 99% no sustained petition
CHOICE	161 (82%)	75% no probation referral 87% no sustained petition
BHC	4 (80%)	100% no probation referral 100% no sustained petition
SUDS	170 (68%)	59% no probation referral 79% no sustained petition

¹ It should be noted that the successful completion criteria vary from program to program. Successful criteria are noted in each program’s respective section.

Introduction

Methodology Summary

SANDAG performs a variety of program evaluation activities to assess the efficacy of six programs funded by JJCPA and track mandated outcomes for the California Office of Youth and Community Restoration (OYCR). The results of these efforts are presented in this annual report. As with the programs and juvenile justice system, SANDAG's evaluation design of the JJCPA has adapted over time to better capture the evolution of JJCPA. In line with last year's evaluation design change, this year's report presents the standardized JJCPA outcome data for youth that successfully exited programming in FY 2024-25 (July 1st, 2024-June 30, 2025). Additionally, Appendix A presents outcome data for their peers that unsuccessfully exited programming as a comparison point. More details on the changes in methodology can be found in the methodology section at the end of the report.

The data tracked **during the period of program participation** included:

- number of arrests for a new criminal offense
- completion of probation
- number of sustained petitions for new offenses
- completion of restitution
- number of probation violations
- completion of community service
- number of institutional commitments
- number of referrals to Probation
- level and type of highest referral charge
- number of bookings into East Mesa Juvenile Detention Facility (EMJDF)
- level and type of highest sustained petition charge
- participant satisfaction
- Family Well-being Assessment (FWBA)
- San Diego Risk and Resiliency Checkup II (SDRRC-II)'s Strength Index score²

In addition to the above elements, four recidivism indicators were tracked **up to 12 months after program intake**:

1. number of arrests for a new criminal offense
2. number of bookings into EMJDF
3. number of referrals to Probation
4. number of sustained petitions for new offenses

²SANDAG analyzed Strength Index scores and level of risk for future recidivism on the San Diego Risk and Resiliency Checkup II (SDRRC-II). For programs where all youth are formal wards, the SDRRC-II is completed on a regular schedule by Probation Officers. The goal for all programs is to have youth Strength Index scores increase and have a lower level of risk by the end of program/wardship. For programs where youth are not formal wards (CAT/Juvenile Diversion, ATD), program staff complete assessments at program intake and program exit. However, due to a change in protocol to the Probation data systems in 2021, community-based organizations (CBOs) no longer had to complete the SDRRC-II assessment for CAT/Juvenile Diversion clients.

Juvenile Justice System Changes in FY 2024-25

Every year the JJCPA programs experience changes and/or modifications as part of the continual improvement process. In FY 2024-25 the items described below were the most significant systemic changes that occurred or continued during this reporting period:

- In 2025, Probation issued a Request for Proposal to add a fourth Achievement Center in the South Bay region to better serve youth in the South part of San Diego County. The Achievement Center will build upon the successful model of the three Achievement Centers, currently funded through JJCPA, and located in North County, Central San Diego, and East County. The Achievement Center will provide programming that is trauma-informed and includes case management, opportunities for pro-social activities, peer support, educational groups, restorative circles, job readiness, linkages to community and behavioral health services, transportation to and from, and meals.
- JJCPA funding will continue to fund Creative Expression through written word, visual art classes, and workshops that provide youth a platform to share their stories, ideas, life experiences and process trauma in a safe and therapeutic space. Writing about their own experiences and their thoughts on community issues can motivate youth to make different and more positive decisions in the future. Creative Expression gives youth in custody the opportunity to share their ideas and life experiences in a safe space by (1) Encouraging literacy and creative writing skills; (2) Providing opportunities for self-expression; (3) Promoting each youth's individual strengths and abilities; (4) Strengthening feelings of self-confidence and self-efficacy; (5) Developing critical thinking skills; (6) Promoting a sense of belonging; (7) Processing trauma and bolstering feelings of self-worth; and (8) Motivating youth to make more positive decisions in the future. These stories are published and shared with other jurisdictions throughout the state of California and with other states.
- In FY 2024-25, JJCPA funds were reallocated to support Youth Engagement within the institutions, efforts focus on building strong, respectful relationships among youth and staff that promote trust, dignity, and positive youth development. Probation strengthens these connections through a behavior management system with clear expectations and meaningful incentives, including on and off-campus activities, such as shared celebratory meals and participation in chess or video game tournaments. These approaches foster trust, collaboration, and a more positive facility environment.
- The Juvenile Justice Coordinating Council allocated JJCPA funds for four (4) full-time Regional Mental Health Clinicians. The Regional Mental Health Clinicians perform behavioral health assessments and screenings in tandem with the case managing Probation Officer and facilitate referrals and engagement to designated programs, including behavioral health services, and other ancillary services indicated for youth supervised by Probation. Regional Clinicians in the Central, East, North and South regions of San Diego will support youth on probation by providing community-based interventions to the youth and their families. This trauma informed program bolsters positive youth development and resiliency to reduce delinquency and recidivism.
- JJCPA will fund one (1) Staff Clinical Support Social Worker who will serve Probation staff working in the institutions, to give them support including counseling and linkages to community resources.

Programmatic Outcomes for FY 2024-25

The JJCPA program outcomes for FY 2024-25 (July 1st, 2024-June 30th, 2025) varied by program, with the fewest recidivism contacts among youth involved in CAT/Juvenile Diversion, ATD, and AC programs. Youth with higher needs and more direct contact (i.e., arrests, probation referrals) with the justice system (i.e., Probation Officers or the court) were often participating in a program that had longer lengths of participation (i.e., SUDS). These programs also had a larger proportion of youth coming into contact (i.e., arrests, probation referrals) with the juvenile justice system. All programs showed improvements as defined by decreased Dynamic Risk to Protective Ratio scores on the San Diego Risk and Resiliency Checkup-II (SDRRC-II). This section provides a summary of the program participants and their program outcomes.³ The overall recidivism outcomes include the percentage of participants who had at least one incident (arrest through institutional commitments) 12 months post intake, and the proportion that occurred during program participation (to better understand at what point a recidivism occurred). In addition to this summary, more information on the specific data is detailed in tables and figures in Appendix A and Appendix B.

Achievement Centers

There are three ACs across San Diego County, distributed in the central, eastern, and northern regions. The central AC is administered by SBCS, the eastern AC by San Diego Youth Services, and the northern AC by COMPACT. The ACs offer participants on probation and at-risk youth an after-school program with a variety of activities including, but not limited to, tutoring, life skills, community mentoring, work readiness, cooking, career preparation, music courses, mental health supports, athletics, and restorative circles.⁴

Number of Youth Served by ACs

- **153** Entered
- **140** Exited
- **69** Successfully Exited

Assessment-based case management is provided to youth and families, along with individual and family counseling, if needed. Youth are also included in programming decisions through participation in Youth Councils. The purpose of ACs is to provide participants opportunities to engage in prosocial and rehabilitation services in the community and divert them from bookings to East Mesa Juvenile Detention Facility (EMJDF) and/or non-compliance with probation terms.

Achievement Center Participant Descriptions

During FY 2024-2025, 153 participants enrolled in AC services and 140 participants exited.⁵ Of these, 131 were unique participants with an exit status (successful or unsuccessful), as individuals who exited multiple times were only counted once for demographic and outcome reporting. Among this group, most identified as Hispanic (76%). The non-Hispanic participants identified as Black (14%), White (6%), Middle Eastern (2%), other ethnicities (2%), and mixed ethnicities (1%). Nearly three in four (73%) AC participants identified as male, while 27% identified as female. The average age at intake was 15.5 years old (SD=1.2). The average length of services per participant was 18.3 days (SD=13.1). This

³ Youth may have entered and exited the program multiple times in the fiscal year; however, their demographic data is only counted once.

⁴ Transportation and meals are provided for participants.

⁵ For a “successful” exit, the AC youth must have 20 days of attendance, must have completed their goals, and not have a new true finding or non-compliance with their court-ordered terms of probation resulting in detention during their time participating in the program. It is also possible that a youth could have completed their goals but did not reach the minimum 20 days of attendance. As a result, those youth are not counted as a “successful” exit.

aligns with the service model recommendation of 20-45 days of programming. Of the 140 youth, 69 successfully exited programming.

Achievement Center Findings for FY 2024-25⁶

- Fifteen percent (15%) of AC participants were **arrested** within 12 months of program intake, while 3% were arrested during program participation (Table A1; Table A15; Figure B1; Figure B7; Figure B13).
- Sixteen percent (16%) of AC participants had a new **referral** to Probation within 12 months of intake, while 4% received a referral during program participation (Table A1; Table A15; Figure B1; Figure B7; Figure B14).
- Seven percent (7%) of participants had a **booking** within 12 months after intake, while 1% had a booking during the program (Table A1; Table A15; Figure B15).
- Seven percent (7%) of participants had a **sustained petition** within 12 months of intake, while none received a sustained petition during the program (Table A1; Table A15; Figure B1; Figure B7; Figure B16).
- Four percent (4%) of AC participants had an **institutional commitment** within 12 months after intake, while none had an institutional commitment during program participation (Table A1; Table A15; Figure B1; Figure B7; Figure B17).
- The majority (96%) of surveyed participants were **satisfied** with services provided by the program (not shown).

Alternatives to Detention

The ATD program is grounded in the evidence-based Juvenile Detention Alternatives Initiative (JDAI) that provides a continuum of community-based and family-supported detention alternatives for participants who are arrested or referred to Probation, but do not require secure detention and would benefit from community-based options. ATD consists of two core service paths: intensive case management and a non-secure shelter, referred to as “cool beds,” or “extended stay,” both of which include intensive case management.⁷ The extended stay offers pre-and post-adjudicated youth who do not have secure or safe placements, a safe, trauma-informed, and residential housing option (instead of detention) for up to 90 days. ATD is administered by SBCS who subcontracts regionally to provide services, these providers are: San Diego Youth Services, Lifeline Community Services, Logan Heights Community Development Corporation, and COMPACT.

Number of Youth Served by ATD

- **530** Entered
- **568** Exited
- **543** Successfully Exited

⁶ As explained in the methodology section, recidivism outcomes will be presented only for unique successful exits for each program in the narrative portion. The outcomes for unsuccessful exits could be found in the appendix.

⁷ Cool Beds are a secure alternative to institutional settings for youth and families who need a break during stressful situations. Cool Beds are voluntary short-term non-secure shelter in host homes. They do not have a minimum stay, but they do not typically exceed 14 days.

ATD Participant Descriptions

During FY 2024-25, 530 participants enrolled in ATD and 568 participants exited.⁸ Of the 547 unique exits, 94% were referred for intensive case management (home services), 5% were referred for “cool bed” services, and <1% were referred for both service tracks. The average length of service was approximately three and a half months (106 days; SD=54.4). Over three in four (77%) of ATD participants were male. Nearly two in three (64%) of participants identified as Hispanic, 17% White, 14% Black, 5% other ethnicities, and 1% Asian. On average, participants were 15.9 years old (SD=1.5) at the start of services. Over a quarter (27%) of participants were on formal probation when they were referred to services. Of the 568 youths, 543 successfully exited programming.

ATD Findings for FY 2024-25

- Four percent (4%) of successful ATD participants had an **arrest** within 12 months of intake while two percent (2%) did during ATD program participation (Table A2; Table A15; Figure B2; Figure B8; Figure B13).
- Sixteen percent (16%) of ATD participants had a new **referral** to Probation within 12 months after intake, with 2% having a referral during program participation (Table A2; Table A15; Figure B2; Figure B8; Figure B14).
- Seven percent (7%) of ATD participants had a **booking** within 12 months of intake, with less than 1% having a booking during program participation (Table A2; Table A15; Figure B15).
- Within the 12 months of intake, 2% of participants had a **sustained petition**, while no participants received one during program participation (Table A2; Table A15; Figure B2; Figure B8; Figure B16).
- One percent (1%) of ATD participants had an **institutional commitment** within 12 months after intake, while no participants had an institutional commitment during program participation (Table A2; Table A15; Figure B2; Figure B8; Figure B17).
- Among the 12 domains in the Family Well-being Assessment (FWBA), the areas with the greatest reductions in need from entry to exit were legal history (37%), nutrition (37%), and income/budget (Table A4).⁹ This means that in 37% of participants, needs related to legal history could have moved from Extreme Need to Less/No Need or from Less Need to No Need from the time of entry to the time of exit.
- Almost all successful participants surveyed (97%) were **satisfied** with services, as were 97% of guardian respondents (Table A3).

With the goal of diverting youth from bookings at EMJDF and possible further involvement in the system, ATD had few youths recidivate during program participation.

⁸ For a “successful” exit, the ATD youth must have completed programming with no new sustained petition. Exits may exceed entries because some youth entered the program in a prior fiscal year but exited during the current reporting period.

⁹ Related to the FWBA, a “domain” is a category or area that focuses on a specific aspect of a person’s life or situation. Domains help organize different parts of a someone’s experience to better understand and address their needs. For example, there are different domains for mental health, education, alcohol/drug use, etc.

Community Assessment Team/Juvenile Diversion

The CAT/Juvenile Diversion program is a collaboration between Probation and community-based service organizations (CBO) covering the San Diego region. The six CAT/Juvenile Diversion sites include: SBCS; Lifeline Community Services (LCS); San Diego Youth Services (SDYS); Casa Familiar, COMPACT, and Logan Heights Community Development Corporation (Logan Heights CDC).

Number of Youth Served by CAT/Juvenile Diversion

- **2,237** Entered
- **2,274** Exited
- **2,100** Successfully Exited

Participants are referred to the program primarily by schools, law enforcement, community-based agencies, Probation, and self-referral. Prevention and juvenile diversion services are provided to address risk behaviors, violence, alcohol and other drug use, mental health needs, school behavior problems, and other delinquent behaviors. Family and community supports are identified through the intake assessment process to identify how the program can best guide participants towards prosocial behaviors.

In FY 2024-25, the CAT/Juvenile Diversion program received 5,398 referrals. Of those referrals, 3,161 (51%) participants were directly connected to supports outside of the CAT/Juvenile Diversion program to ensure more adequate individualized services were provided. The other 2,237 participants referred were enrolled in CAT/Juvenile Diversion case management services. The CAT/Juvenile Diversion sample evaluates the 2,183 unique youth that received case management services (317 CAT/Juvenile Diversion long term, 1,154 CAT/Juvenile Diversion short term, 181 diversion long term, 531 diversion short term) who exited the program between July 1, 2024 and June 30, 2025, regardless of when they entered.¹⁰

CAT/Juvenile Diversion participant descriptions

During FY 2024-25, 2,237 participants enrolled in CAT/Juvenile Diversion services and 2,274 exited.¹¹ For the 2,183 unique exits, over seven in ten (72%) participants identified as Hispanic and 13% identified as White. Less than one in ten identified as Black (8%), other ethnicities (5%), or Asian (2%). CAT/Juvenile Diversion clients were proportionately more male (55%) and the average age for all participants was 13.1 years old (SD=2.9). The average age is consistent with FY 2023-24 reporting. The average length in services was 97.0 days per participant (SD=40.0 days). This average length in services is slightly higher than the program model's focus on short-term interventions and services of 90 days with extended service options available on a case-by-case basis. Of the 2,274 participants who exited, 2,100 did so successfully.

CAT/Juvenile Diversion findings for FY 2024–25

- Less than one percent (<1%) of CAT/Juvenile Diversion participants had an **arrest** within 12 months of intake and during program participation (Table A5; Table A15; Figure B3; Figure B9; Figure B13).
- Three percent (3%) of CAT/Juvenile Diversion participants had a **referral** within 12 months after intake and 1% of participants received a referral during program participation (Table A5; Table A15; Figure B3; Figure B9; Figure B14).

¹⁰ Youths could have entered in the previous fiscal year but exited in the current reporting period. Youths could have also entered and exited the program multiple times; however, their demographic information is only counted once.

¹¹ For a “successful” exit, the CAT/Juvenile Diversion youth, depending on their service plan, must complete at least 51% of each goal. Some youths may have one or two, or more goals.

- Less than one percent (<1%) of CAT/Juvenile Diversion participants had a **booking** during the 12-month window after intake and less than 1% had a booking during program participation (Table A5; Table A15; Figure B15).
- One percent (1%) of participants had a **sustained petition** during the 12-month post intake window, while less than 1% of participants received one during the program (Table A5; Table A15; Figure B3; Figure B9; Figure B16).
- Less than one percent (<1%) of CAT/Juvenile Diversion participants had an **institutional commitment** for a new offense in the 12-month window and none occurred during the program (Table A5; Table A15; Figure B3; Figure B9; Figure B17).
- Among the 12 domains in the Family Well-being Assessment (FWBA), the areas with the greatest reductions in need (from entry to exit) were legal history (34%), mental health (29%), and children's education (25%) (Table A6). This means that the legal history needs of 34% of surveyed participants could have moved from Extreme Need to Less/No Need or from Less Need to No Need from the time of entry to the time of exit.
- Ninety-four percent (94%) of participants surveyed were **satisfied** with services, as were 98% of guardians surveyed (Table A7; Table A8).

Overall, CAT/Juvenile Diversion youth were younger than other JJCPA participants. The program enrolls non-justice involved youth with the intention of preventing future justice involvement. Analysis up to 12-months post program intake revealed that most youth did not commit an offense.

CHOICE

The CHOICE program is a nationally recognized model grounded in best practices and evidence-based principles. The program continues to serve youth on probation throughout the County of San Diego who are at risk of violating their terms of probation. The goal of the program is to support and guide youth to make positive choices while completing court-ordered mandates and to achieve their case plan goals.

Number of Youth Served by CHOICE

- **183** Entered
- **196** Exited
- **161** Successfully Exited

These services are accomplished through daily contacts with the youth that include, phone calls, texts, home visits, school visits, family support activities, life skills development, tutoring assistance, service referrals, recreational activities and community service. Probation contracts with SBCS to oversee regional services and provide CHOICE services and providers in the Central/East (SDYS), South (SBCS), and North (LCS) areas of the County.

CHOICE participant descriptions

During FY 2024-2025, 183 participants enrolled in CHOICE services and 196 exited.¹² Of the 173 unique exits, CHOICE participants were primarily male (87%) and 15.9 years old, on average (SD=1.4). Most CHOICE participants identified as Hispanic (82%), followed by Black (15%), White (2%), other ethnicities (1%), and Asian (1%). On average, CHOICE youth participated in the program for a little over three and a half months—122.8 days (SD=77.9 days). Of the 196 exits, 161 youth successfully exited programming.

¹² For a “successful” exit, the CHOICE youth must have completed programming with no new sustained petition.

CHOICE findings for FY 2024-25

- Ten percent (10%) of CHOICE participants had an **arrest** in the 12 months after intake, while 6% were arrested during program participation (Table A9; Table A15; Figure B4; Figure B10; Figure B13).
- Twenty-five percent (25%) of CHOICE participants had a new **referral** within 12 months after intake, with 13% receiving one during program participation (Table A9; Table A15; Figure B4; Figure B10; Figure B12).
- Ten percent (10%) of participants were **booked** into EMJDF within 12 months of intake into CHOICE, with 3% receiving a booking during the program (Table A9; Table A15; Figure B15).
- Thirteen percent (13%) of participants had a new **sustained petition** within 12 months of intake, with 3% receiving one during the program (Table A9; Table A15; Figure B4; Figure B10; Figure B16).
- One percent (1%) of participants had an **institutional commitment** within 12 months of intake, none received an institutional commitment during the program (Table A9; Table A15; Figure B4; Figure B10; Figure B17).
- Fifty-six percent (56%) of participants' SDRRC-II Dynamic Risk to Protective Ratio scores decreased from the first to most recent completed assessment (Figure B22).
- Nearly all (98%) participants and all guardians (100%) surveyed were **satisfied** with services (Table A10).

CHOICE youth have some of the greatest needs and are at the highest risk of recidivating. These baseline needs and risk of recidivation bore out in the outcomes, with around one in four experiencing further system contact up to 12-months following intake.

Behavioral Health Court

Juvenile Behavioral Health Court (BHC) is a collaborative court-program that provides trauma-informed services to address behavioral health care, recovery, and treatment of youth on probation. The BHC team includes partners from Juvenile Court, Public Defender's Office, District Attorney's Office, Correctional Health Providers (CHP), Lifeline Community Services, San Diego Center for Children (SDCC) Wrap Works, and Probation. The team meets on a weekly basis to review candidates for the program, develop treatment plans, and assess participants' progression.

BHC's mission is to improve the quality of youth's lives, provide mental health support, prevent further arrests, and increase public safety. Their collaborative team provides close, detailed probation supervision support, individual and family therapy, medical evaluations, substance use testing and counseling, educational recommendations, and family focused wraparound services. In partnership with youth and their family, the team agrees on goals to help youth successfully complete probation, improve family relationships, succeed in school, and get involved in their community.

Number of Youth Served by BHC

- **17 Entered**
- **5 Exited**
- **4 Successfully Exited**

BHC Participant Descriptions

During FY 2024-25, 17 participants enrolled in BHC services and 5 exited.¹³ Of the participants who exited BHC, three (75%) identified as Hispanic and two (25%) identified as Black. All participants with available data (n=4) identified as male. The average age of participants was 14.8 years old (SD=1.0 years) and received services for approximately 14 months (mean=448.8 days, SD=240.1). Of the 5 participants that exited, 4 successfully exited programming.

BHC Findings for FY 2024-25

- No participants had an **arrest** within 12 months after intake or during BHC programming (Table A11; Table A15; Figure B5; Figure B11; Figure B13).
- No participant had a new **referral** within 12 months after intake or during participation (Table A11; Table A15; Figure B5; Figure B11; Figure B14).
- No participant had a **booking** within 12 months after intake or during participation (Table A11; Table A15; Figure B11; Figure B15).
- No participants received a **sustained petition** or **institutional commitment** within 12 months after intake or during program participation (Table A11; Table A15; Figure B5; Figure B11; Figure B16; Figure B17).
- In regard to program compliance outcomes, no participant had a probation violation during program participation (Table A11; Figure B18); none required restitutions (Table A11; Figure B19); the three youth assigned community service did not complete it (Table A11; Figure B20).
- Two (67%) BHC participants' SDRRC-II Dynamic Risk to Protective Ratio scores decreased, from the first to most recent probation completed assessment (Figure B22).

The BHC program provides intensive court and Probation oversight of those youth with substantial mental health and substance use issues.

Substance Use Disorder Services

Participants enrolled in the Substance Use Disorder Services (SUDS) program are case-managed by Juvenile Recovery Specialists (JRS) through the contractor Vista Hill. The SUDS program provides countywide intervention services, which include case management, regular drug testing, referral services, alcohol and other drug education, and family support services, as needed, in collaboration with the Supporting Adolescents and Families in Recovery (S.A.F.I.R) program. SUDS clients are divided into three levels of care or tracks:

Number of Youth Served by SUDS

- **148** Entered
- **250** Exited
- **170** Successfully Exited

- **Track 1** is a 90-day program for participants who are assessed with having less severe substance use issues. These participants are randomly drug tested and monitored for any increase/change in substance use. They participate in multi-family group sessions, which are attended by the participant and a parent/guardian to receive substance use education and other life skills topics.
- **Track 2** is a 180-day program for participants identified as having a substantial history or more severe substance use issues, and in need of a higher level of care. This includes enrollment and participation in a county-approved substance use treatment program, increased case

¹³ For BHC, "successful" exit means the youth successfully completed the program, and/or wardship was terminated by the Court. Exits may exceed entries because some youth entered the program in a prior fiscal year but exited during the current reporting period.

management with JRS, and additional multi-family group sessions. Participants continue to be randomly drug tested by JRS staff and receive additional case management, as needed.

- **Track 3** is a 90-day program for participants involved in Probation's diversion and/or informal supervision. Each participant has individualized requirements per their contract with Probation (e.g., frequency of drug testing, counseling, and treatment service plans). JRS staff monitor each participant's progress with meeting contract obligations, as they relate to drug testing and participation in multi-family group sessions.

SUDS Participant Descriptions

During FY 2024-25, 148 participants enrolled in SUDS services and 250 exited.¹⁴ Of the 235 unique SUDS exits, a majority of participants identified as Hispanic (73%), followed by Black (19%), White (7%), and other ethnicities (1%). SUDS clients primarily identified as male (82%) and on average were 16.1 years old (SD=1.3) at intake. The average length of SUDS services was 209.2 days (SD=147.1 days). This length of services indicates clients often received some combination of the tracks extending participation beyond the traditional 90-day programming for Track 1 and Track 3. Of the 250 exits, 170 youths successfully completed programming.

SUDS Findings for FY 2024-25

- Thirty percent (23%) of SUDS participants had an **arrest** within 12 months after intake, while 23% were arrested during programming (Table A13; Table A15; Figure B6; Figure B12; Figure B13).
- Forty-one percent (41%) of SUDS participants had a **referral** within 12 months after intake, and 33% received a referral during programming (Table A13; Table A15; Figure B6; Figure B12; Figure B14).
- Sixteen percent (16%) of SUDS participants had a new **booking** within 12 months after SUDS intake, with 13% receiving one during program participation (Table A13; Table A15; Figure B15).
- Twenty-one percent (21%) of SUDS participants had a **sustained petition** within 12 months after intake, and 16% received one during program participation (Table A13; Table A15; Figure B6; Figure B12; Figure B16).
- Fourteen percent (14%) of SUDS participants had an **institutional commitment** within 12 months after intake, and 12% received one during program participation (Table A13; Table A15; Figure B6; Figure B12; Figure B17).
- Thirty percent (30%) of SUDS participants had a **probation violation** during program participation (Table A13; Figure B18).
- In regard to program compliance outcomes, 59% **completed restitutions** (Table A13; Figure B19), and none were assigned community service (Table A13; Figure B20).
- Seventy-four percent (74%) of SUDS participants' SDRRC-II Dynamic Risk to Protective Ratio scores decreased, from the first to most recent probation completed assessment (Figure B22).
- Eighty-seven percent (87%) of survey respondents were **satisfied** with program services (Table A14).

High rates of program compliance and participant satisfaction suggest positive engagement and effectiveness in achieving program goals.

¹⁴ For a "successful" exit, the SUDS youth must have a minimum of 30 days of continuous sobriety (documented by negative drug tests) and must have completed the goals on their individualized service plan (e.g., drug testing, referral to services).

Methodology In-Depth

To ensure comparable recidivism outcomes (defined as arrests, bookings, new referrals, sustained petitions, and institutional commitments) across the six programs with varying program lengths, recidivism was tracked both during program and for up to 12 months post-intake. Since the 12-month post-intake period overlaps with the time youth were enrolled in the program, these values should not be viewed as mutually exclusive. For most programs, the post-intake period includes all recidivism that occurred during the program. However, for programs with average lengths exceeding one year, the 12-month post-intake period may be shorter than the full program duration.

It is important to note that depending on the alignment of the fiscal year and some participants' exit dates, the length of the post-intake data may vary. Additionally, programs may report more exits than entries in a given fiscal year because some youth may have enrolled in the previous fiscal year. Moreover, due to the limits of the court order for this report, adult criminal justice databases for arrests and Probation were not available. As a result, this report does not include recidivism data for youth who became adults during the reporting period and committed new offenses.

Several programs (e.g., ATD, CHOICE) define success in a way that may skew the results of the "during program" outcomes. For example, for a CHOICE youth to be deemed successful, they must complete the program without incurring a new sustained petition. As a result, youth who were on track to complete the program but received a new sustained petition would automatically be categorized as unsuccessful. Therefore, caution is advised when interpreting "during program" outcomes for these programs.

In previous reports, recidivism and outcomes were treated as mutually exclusive within each program. For instance, if a youth was enrolled in both ATD and CHOICE, only outcomes from the more intensive CHOICE program were reported. However, beginning in FY 2019-20, outcomes were tracked separately for each program participation. This shift aimed to capture a more complete picture of program outcomes to support better programmatic decision-making. Consequently, the data should be interpreted with the understanding that youth may appear in the outcomes of multiple programs.

Each program reports the total number of entries and exits, although youth may enter and exit a program multiple times within a fiscal year. Therefore, the descriptive data are based on a unique individual count. For the recidivism analysis, the exit date from the earliest exit within the fiscal year is used.

In prior reports, outcomes for all youths who exited JJCPA programs were included. However, to more accurately assess treatment effectiveness, the FY 2021-22 report distinguished between youth who successfully or unsuccessfully exited each program. Due to this recent change in methodology, comparisons between the current report's outcomes and reports published prior to the FY 2020-21 report should be made with caution, as the shift in methodology affected the criteria for inclusion in the recidivism analyses.

In prior reports evaluating changes in the SDRRC-II assessment scores, the Strength Index (total protective score) was used to measure the presence of positive factors in youths' lives. Starting with this report, the analysis transitioned to using the Dynamic Risk to Protective Ratio, which offers a more balanced and comprehensive measure by incorporating both dynamic risk factors and protective factors. This ratio serves as a more meaningful indicator of program impact, with decreases suggesting improved outcomes, such as enhanced supports or reduced risk, and increases potentially indicating emerging needs or a decline in protective influences.

Total	72	49	30	26	6	3	0	1

Notes: The sample size for program compliance outcomes will vary as cases are excluded if the case is "not applicable" to the measure. Due to rounding, some recidivism columns may not add to 100%. Cases with missing data not included. Interpretation of percentages from small sample sizes should be made with care as limited observations may not accurately represent the broader population trends.

Table A14: SUDS Client Satisfaction Questionnaire (CSQ) Results (FY 2024-25)

Question	Participants Agree
Treated with respect	88%
Good relationship with Juvenile Recovery Specialist	89%
Staff concerned with well-being	86%
Staff expectations clear	87%
Satisfied with program experience	87%
Satisfied with the substance abuse services	86%
Changed feelings about substance abuse	82%
Would recommend the program to a friend	84%
Treatment fits needs	78%
Helped stop substance use	81%
Learned a lot in alcohol and drug class	87%
Learned a lot in relapse prevention class	84%
Total range	91-93

Notes: Cases with missing information not included. Percentages include clients who responded, "Strongly Agree" or "Agree" on a five-point scale.

Figure B16: Sustained Petitions by Program During Program Participation for Successful Youth (FY 2023-24 to FY 2024-25)

Note: Cases with missing information not included. BHC not included as there were no sustained petitions during program participation.

Source: PCMS (accessed March 2026).

Figure B17: Institutional Commitments by Program During Program Participation for Successful Youth (FY 2023-24 to FY 2024-25)

Note: Cases with missing information not included. AC, CAT/Juvenile Diversion, and BHC not included as there were no institutional commitments during program participation.

Source: PCMS (accessed March 2026).

Figure B18: Probation Violations for BHC and SUDS Successful Youth (FY 2023-24 to FY 2024-25)

Sources: PCMS, Probation Compliance Exit Form (accessed March 2026).

Figure B19: Completed Restitutions for BHC and SUDS Successful Youth (FY 2023-24 to FY 2024-25)

Note: BHC is excluded from this figure due to both figures being 0%.
Sources: PCMS, Probation Compliance Exit Form (accessed March 2026).

Figure B20: Completed Community Service for BHC and SUDS Successful Youth (FY 2023-24 to FY 2024-25)

Note: In the 2024-25 reporting period, no SUDS participant was assigned community service.
Sources: PCMS, Probation Compliance Exit Form (accessed March 2026).

Figure B21: Completion of Probation Requirements of All Youth by Program (FY 2023-24 to FY 2024-25)

Note: Cases with missing information not included.
Sources: PCMS, Probation Compliance Exit Form (accessed March 2026).

Figure B22: SDRRC-II Dynamic Risk to Protective Ratio Scores Over Time by Program (FY 2024-25)

p<0.05, **p<0.01, *p<0.000*
Notes: Significant value indicates statistically significant changes in Dynamic Risk to Protective Ratio Scores over time, meaning the difference is unlikely due to random chance. A decreased ratio indicates either dynamic risks decreased, protective factors increased, or both. Cases with missing information not included.
Sources: PCMS, SDRRC-II (accessed March 2026).
