Notes:	The AQI is an index for reporting daily air quality. EPA uses the AQI for five major air pollutants regulated by the Clean Air Act: ground-level ozone, particulate matter, carbon monoxide, sulfur dioxide and nitrogen dioxide. For each of these pollutants, the EPA has established national air quality standards to protect against harmful health effects. The higher the AQI value, the greater the level of air pollution and the greater the health danger.										
	Because values for California and the U.S. are not available, California metro average was derived by averaging the AQIs of the five California metropolitan areas listed here. Similarly, the US metropolitan average is determined by averaging all 21 metropolitan areas listed here.

Notes: MCL = Maximum Contaminant Level, the highest level of a contaminant allowed in drinking water.											
Trihalomethanes, Turbidity and Total Dissolved Solids are Chemical Contaminants.											
Coliform Bacteria is a biological contaminant - some of which occurs naturally in the environment.											
Coliform Bacteria was initially measured as a percent of volume, now it is "percent of positive presence".

Notes:	The Roadway Congestion Index (RCI) is a ratio of daily traffic volume to the supply of roadway. The RCI compares the number of hours of daily roadway congestion in a particular area to a standard 7 hours per day of rush hour traffic (3.5 in the a.m. and 3.5 in the p.m.). If an area's RCI is close to 0.6, its roadways are generally congested in the mornings and evenings during peak hour travel, but not during other parts of the day. The roads of an area with an RCI value of 1.0 are generally congested for approximately 11 hours each day.

Notes:	In 1992 census controls were implemented. In 1993 the survey moved to computer-assisted interviewing [from pencil and paper interviewing]. In 1994 health insurance questions were redesigned that impact the results. In 1998 people with no coverage other than access to Indian Health Service are no longer considered covered by health insurance.

Notes:	For 1991 and 1993, the US totals are based on the sum of the data published by ACI. California totals are based on the sum of cargo traffic at the following airports: Los Angeles, Mather, Oakland, Orange, Sacramento, San Diego, San Francisco, San Jose and Santa Barbara.										
	For all metro areas, the 1993 data are derived by applying the rate of change to an adjacent year data.										
	Washington DC includes National airport and Dulles airport; Miami-Fort Lauderdale includes Miami airport and Fort Lauderdale Airport.
