Corridor Study Overview

Caltrans, in partnership with SANDAG, is conducting a study to examine current transportation facilities and services along the Interstate 805/5 south of SR54 corridor.

The Interstates 805/5 corridor study will:

- Identify and assess transportation improvements to enhance the mobility of local and out-of-town travelers.
- Focus on corridor wide improvements that will help improve the overall regional transportation system and its associated facilities.
- Identify how best to coordinate transportation improvements with local land use and development plans.

Interstates 805/5 Corridor Profile

- These corridors are utilized as primary commuter thoroughfares and provide a direct link to major employment centers in the region, including downtown San Diego.
- Interstates 805 and 5 are key corridors for the movement of people and goods and serve as the primary conduit connecting San Diego’s metropolitan area with Mexico and Los Angeles.
- Interstate 5 connects to the San Ysidro border – the busiest land port of entry into the United States. This corridor is the region’s primary international gateway for auto and pedestrian traffic between Mexico and the United States.

Goals of the Study

- Improve the mobility for people and goods
- Improve accessibility to major employment and regional activity centers
- Maximize the efficiency of the existing and future transportation system
- Promote livable communities and access to recreational activities
- Minimize transportation-related effects on the environment

Timeline

Spring 2003 • Begin Study Process
Fall 2004 • Release Draft I-805/5 Study
Spring 2004 • Release Alternatives
Winter 2005 • Release Final I-805/5 Study

How You Can Get Involved

For more information about the transportation study, check out the project Web page at www.sandag.org/805-5.

Comments

Please provide comments about the Interstates 805/5 corridor study.
