**Transponder Mounting Instructions:**

**Preferred** mounting position:

1½ inches maximum

**Alternate** mounting positions:

1½ inches maximum

(drawn not to scale)

**Dear I-15 FasTrak™ Patron,**

Please remember to always have your transponder displayed correctly on the windshield when using San Diego’s I-15 Express Lanes or any other FasTrak™ toll roads and bridges in California.

According to Section 23302(b) of the Vehicle Code, you are responsible for mounting your transponder properly. Sections 26708(b)(11) and 26708(b)(3) of the Vehicle Code describe the only acceptable locations for mounting your transponder (as illustrated in the graphic above). You may refer to the Official California Legislative Information Web site at www.leginfo.ca.gov/calaw.html for more details. Please note that if mounted incorrectly, the transponder may not work and you could be subject to citation.

**Installation Instructions:**

1. Peel backing off the Velcro™ adhesive strips. Hold the transponder in your hand with the Velcro™ strips facing the inside of the windshield.

2. Mount the transponder squarely in the top middle directly behind the rear view mirror no more than 1-½ inches from the windshield’s top edge, as shown above. If your vehicle does not permit the placement of the transponder in that location; use either of the alternate mounting positions and be sure to mount the transponder in the lower left or right corner of the windshield not more than 1-½ inches from the lower and outer edge.

3. Press the transponder firmly against the glass.

**IMPORTANT:**

- Use the transponder only in the vehicle you have registered with FasTrak™. Failure to do so may result in a photo being taken of your vehicle’s license plate and a violation notice will be sent to the address you have on file with the California Department of Motor Vehicles.

- Do not attach the transponder to your visor, dashboard, or other location. The transponder should be affixed to the windshield before you enter the I-15 Express Lanes.

- Never wave the transponder or hold it inside or outside of your vehicle as you approach the toll zone overhead readers as this will result in improper communication with the toll collection system.

If you need additional Velcro™ adhesive strips, or have any questions, please contact the Customer Service Center at 1-888-889-1515.
