The San Diego Association of Governments (SANDAG) and Navy Region Southwest (Navy) are working together to develop strategies that minimize potential impacts to Navy operations at 3 transportation facilities: Pacific Coast Highway | Harbor Drive | SR-75/SR-282

During Phase One of the grant, SANDAG and the Navy worked with project team stakeholders to complete an initial assessment of the climate change threats to military installations and surrounding transportation assets. During Phase Two, specific climate adaptation actions will be identified along the corridors, while data analyzed on military travel behavior will inform development of mitigation strategies and infrastructure projects for the entire region.

SANDAG and the Navy will develop a final report by late Summer 2022.
